Laboratory Manual

Academic Year	:	2026-27	Semester	:	3rd
Course code	:	ITUE203	Course name	:	WEB DEVELOPMENT FRAMEWORKS

Practical – 15:-

Final Integration, Testing, Documentation, GitHub Submission, and Local Deployment

Problem Statement:- To develop and deploy a complete, secure, responsive, and user-friendly StudentHub Portal by integrating the existing student and administrator modules. The system should provide functional navigation, authentication, role-based access, database connectivity, student and event management, input validation, and appropriate security controls. The final application must be tested end-to-end, documented with installation and testing instructions, and submitted with the source code, SQL database dump, test report, screenshots, and GitHub repository link.

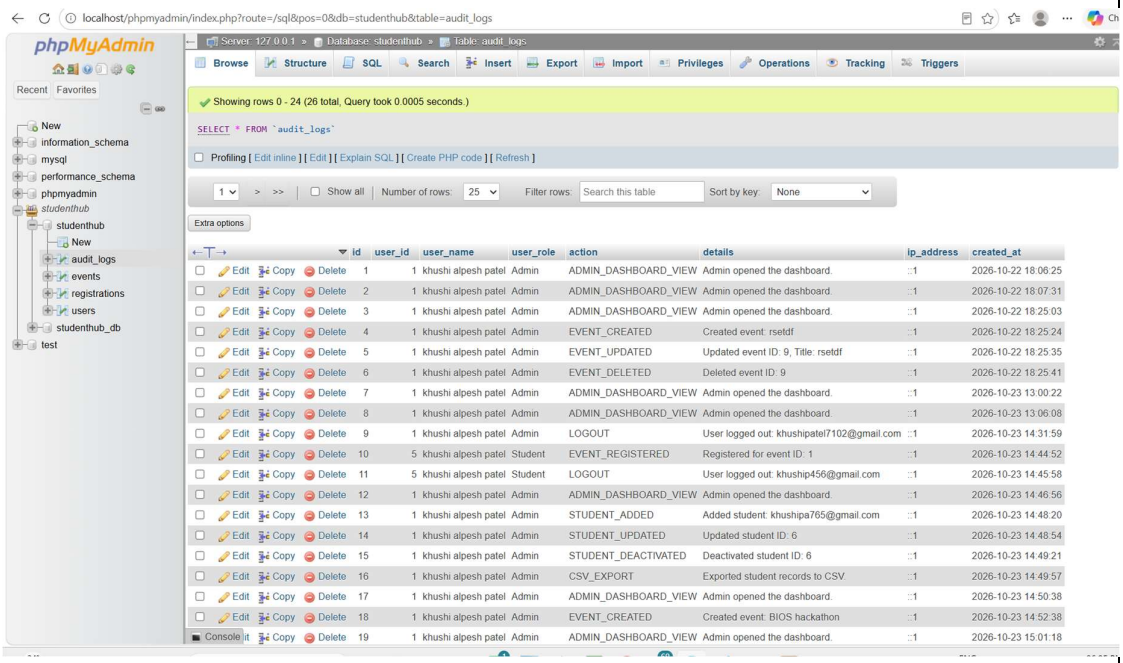

Objective:- To integrate all modules of the StudentHub Portal into a single functional web application, verify navigation, authentication, role-based access control, database operations, input validation, AJAX functionality, security, and accessibility, and deploy the project locally using

XAMPP/Apache. To document the setup and testing procedures and submit the complete source code and database dump through GitHub.

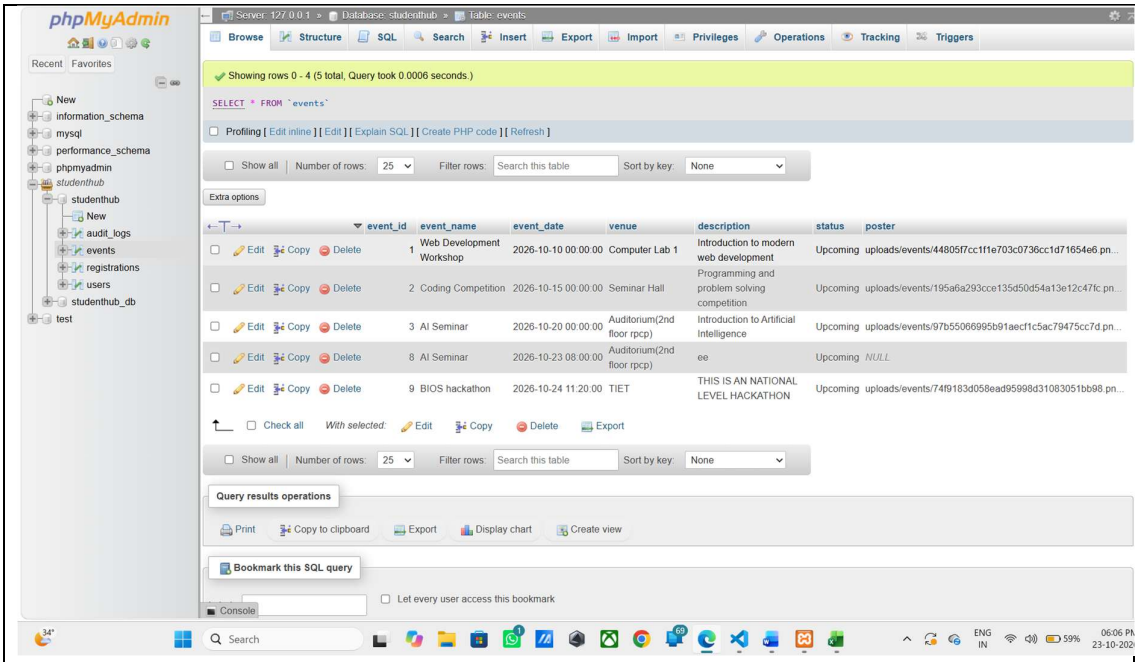

Github Repository link:- [25cs065-ux/STUDENTHUB]

Screenshots:-

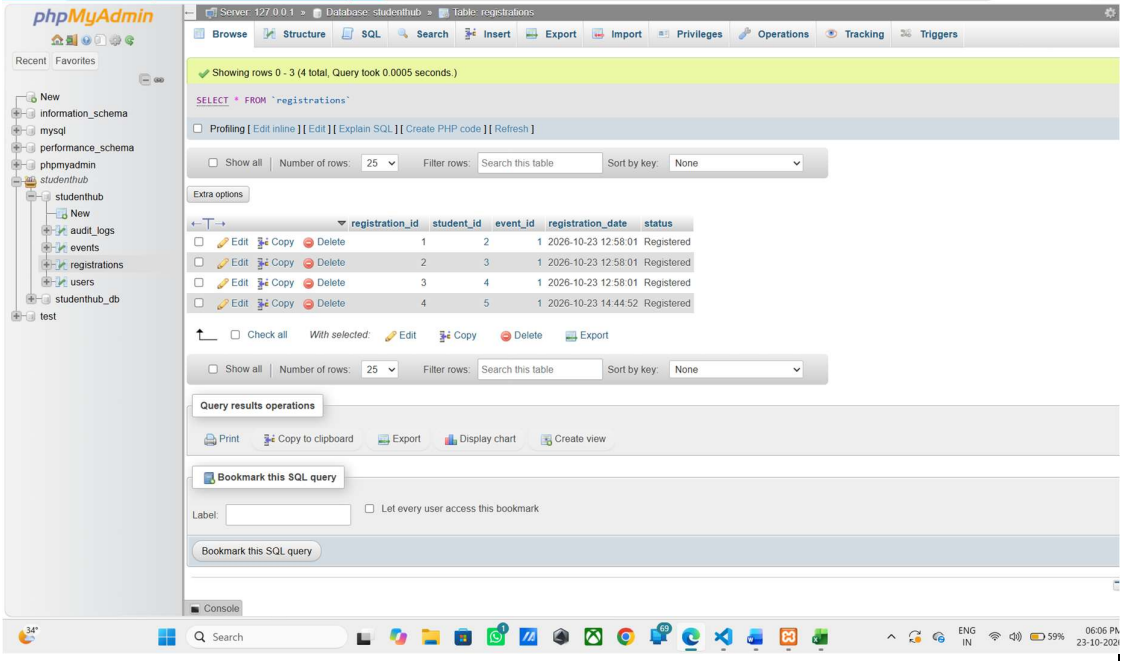

database(audit logs) :-

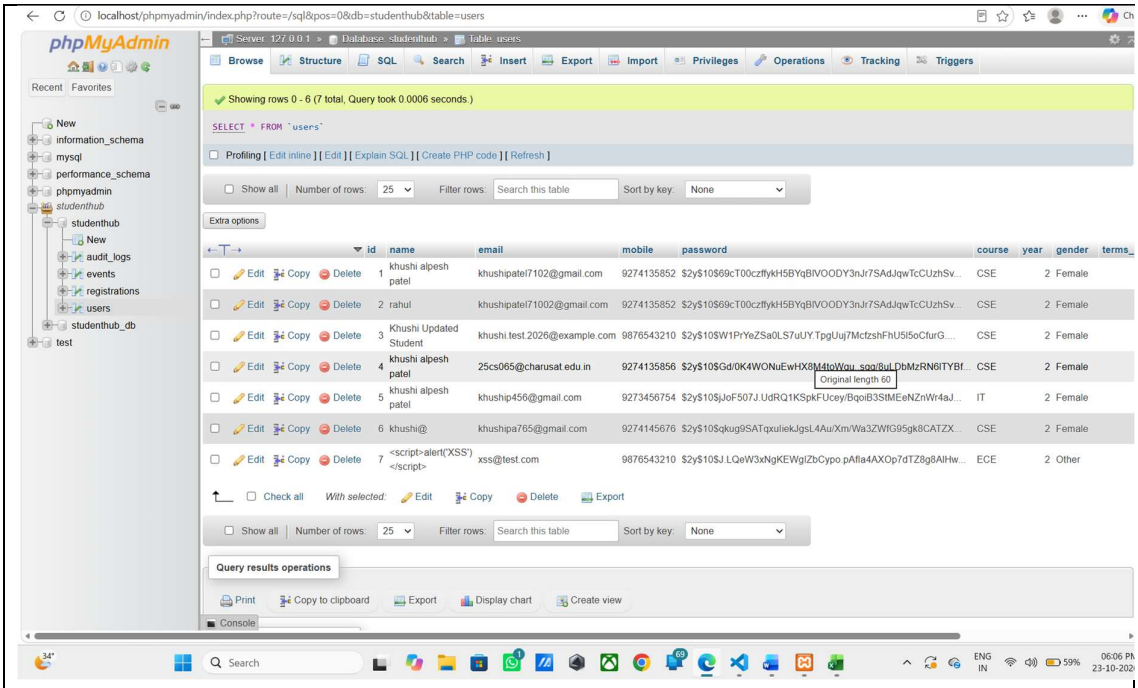

Database(events):-

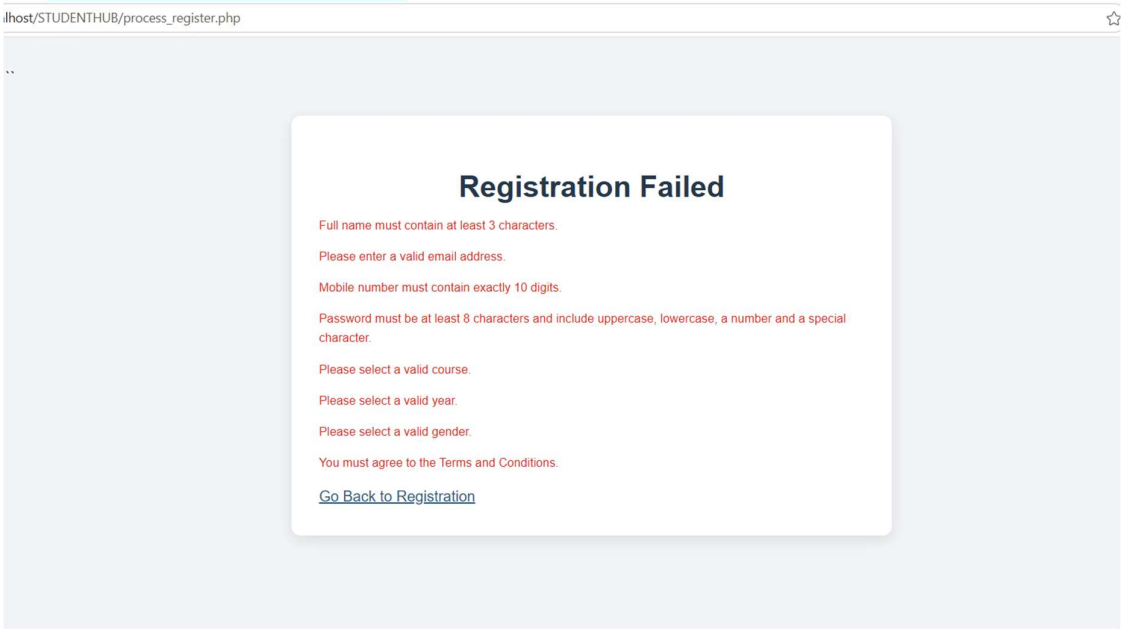

Database(registrations):-

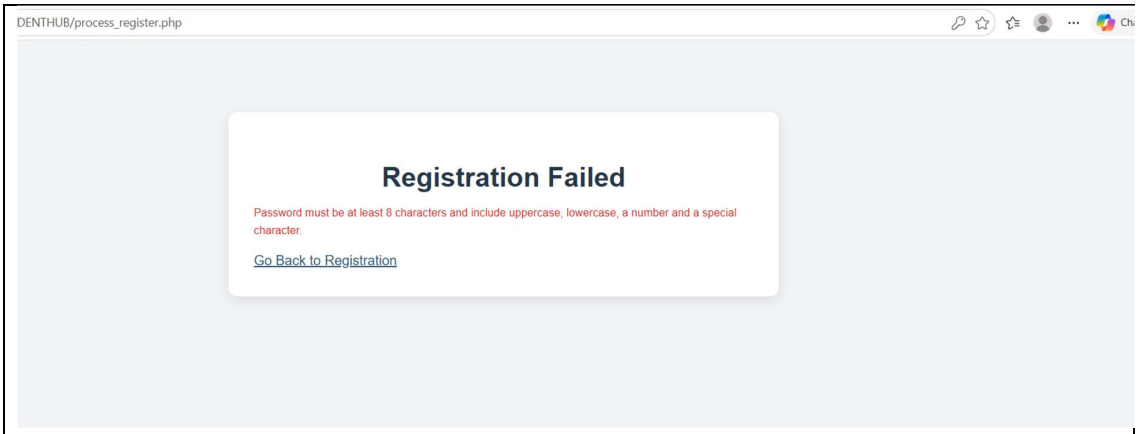

Database(users):-

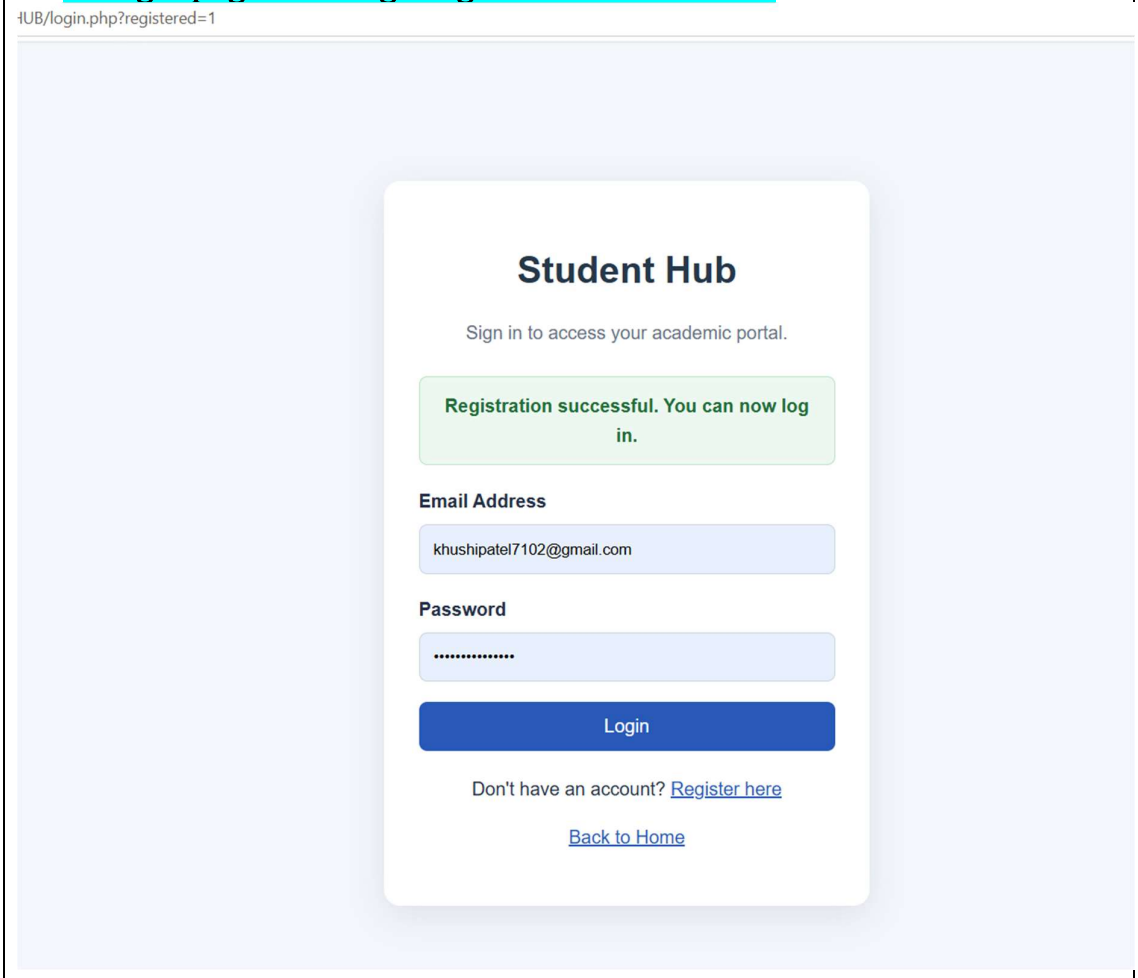

1. red validation errors

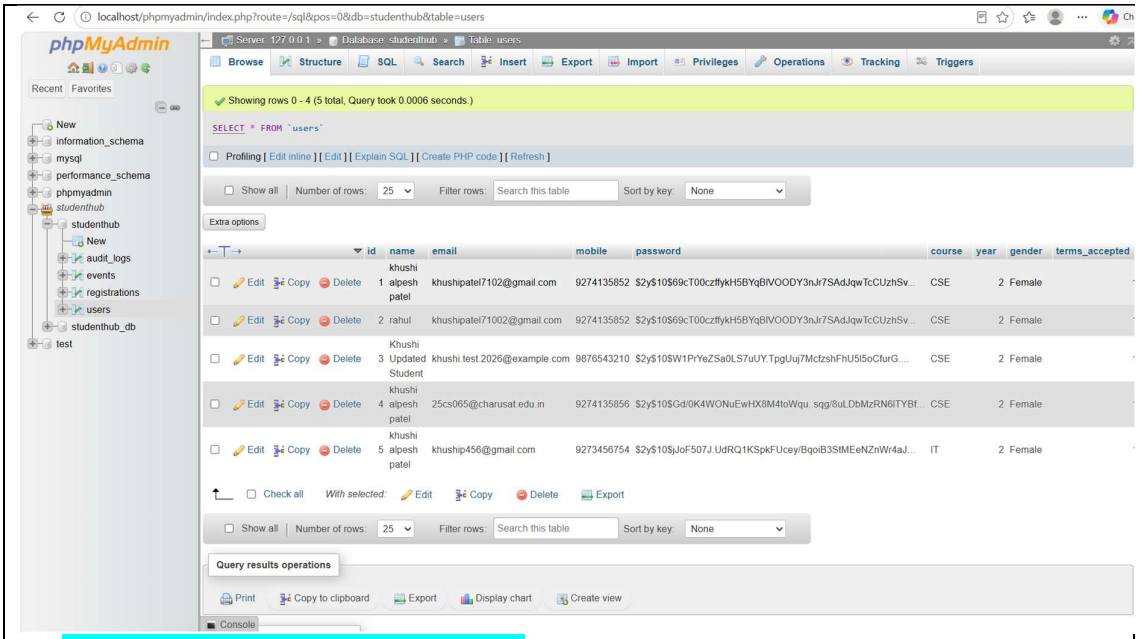

2. strength bar showing Weak

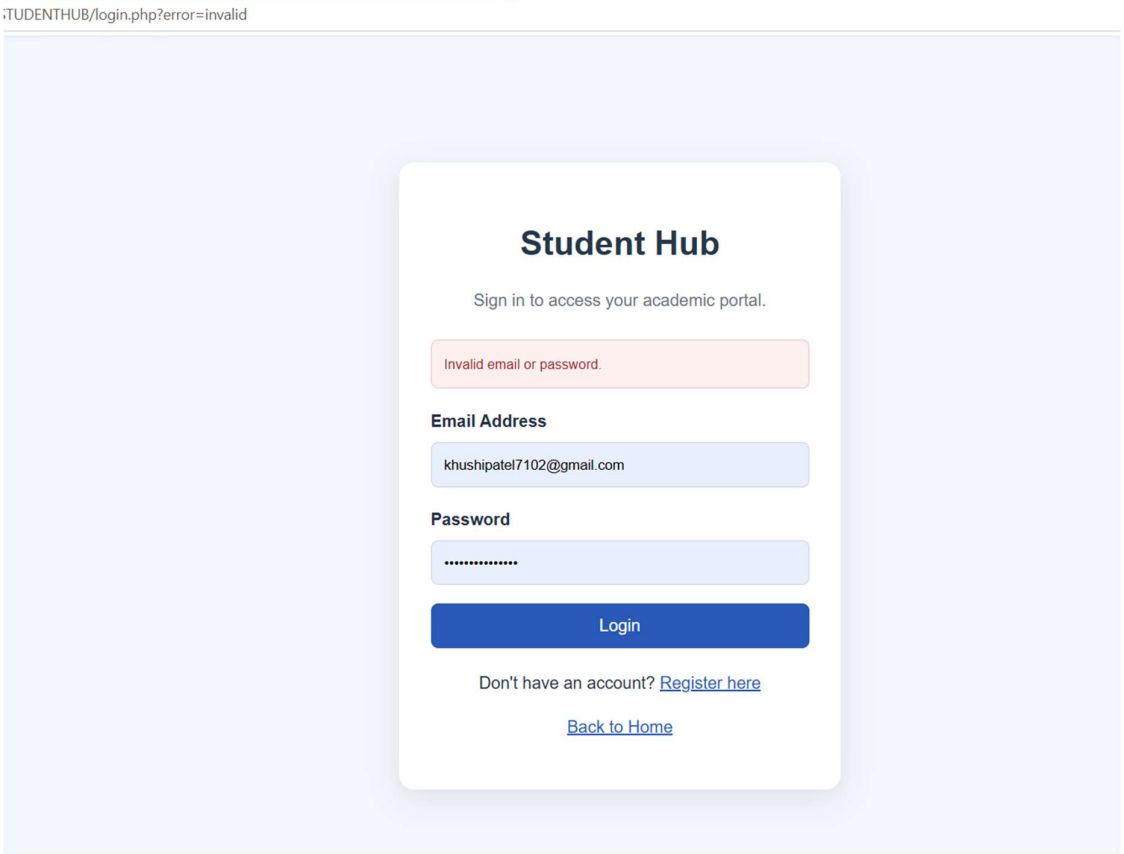

3. login page showing "Registration successful"

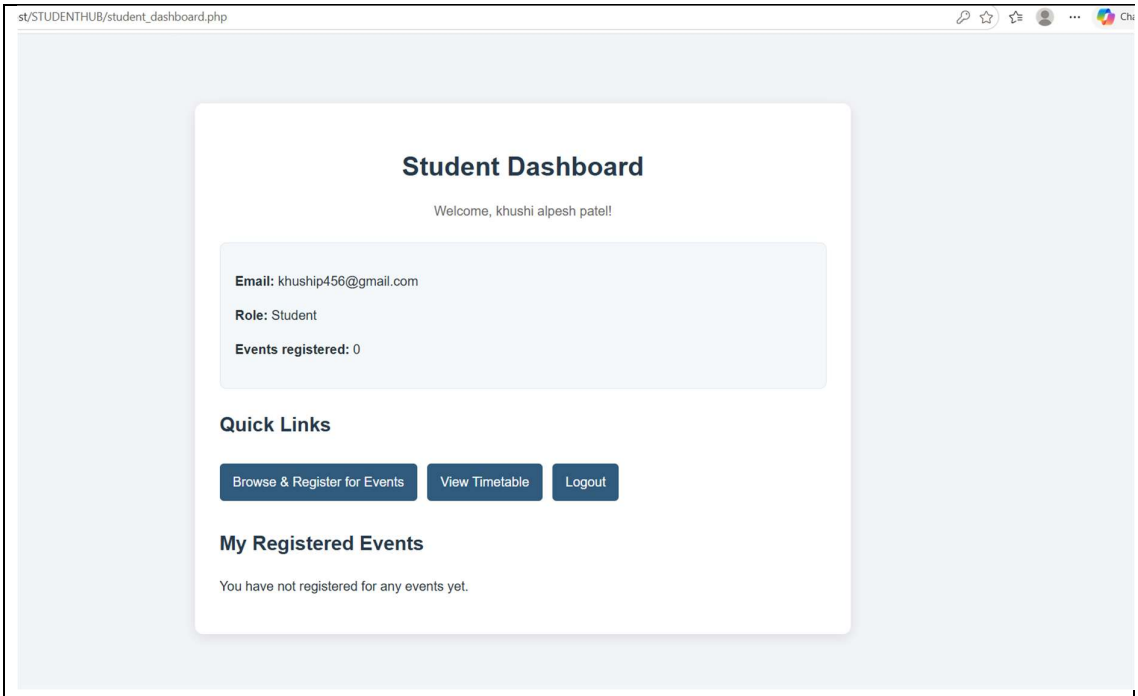

4. new row with the hashed password

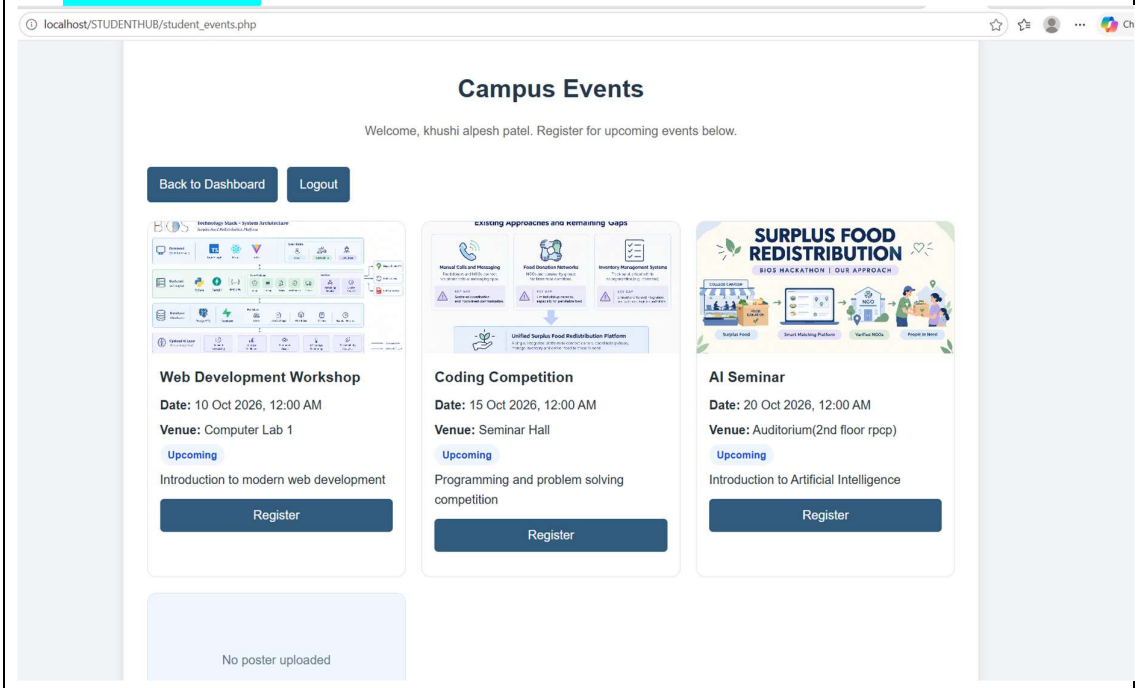

5. "Invalid email or password"

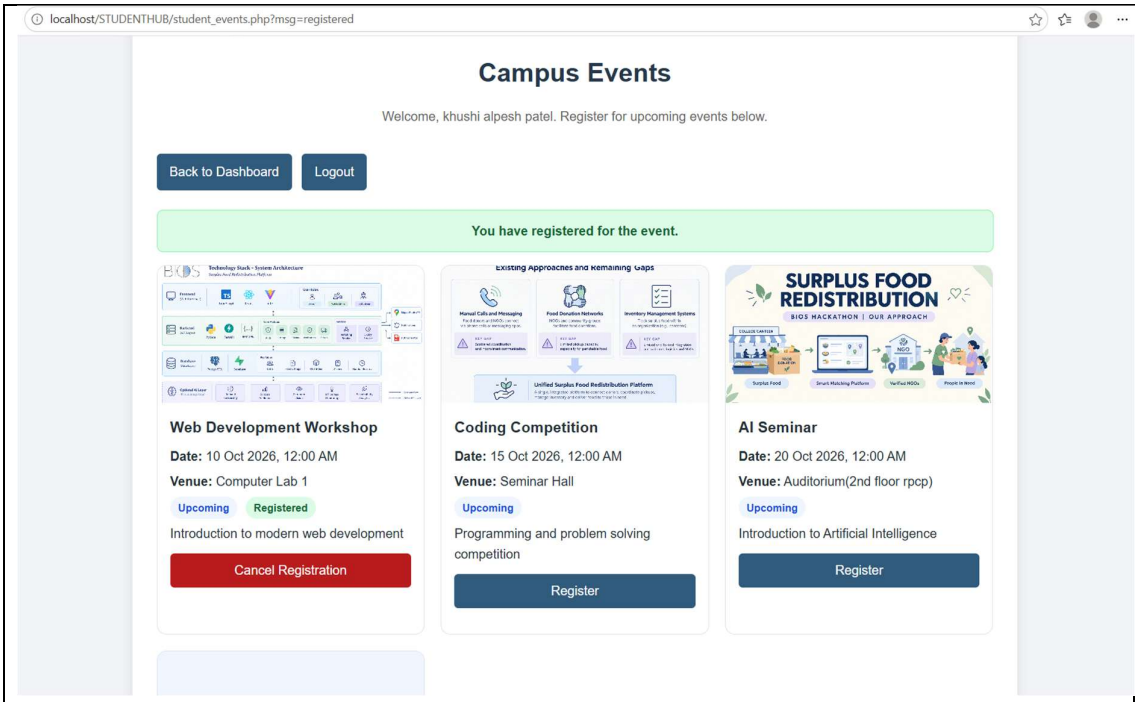

6. new student dashboard (URL bar visible)

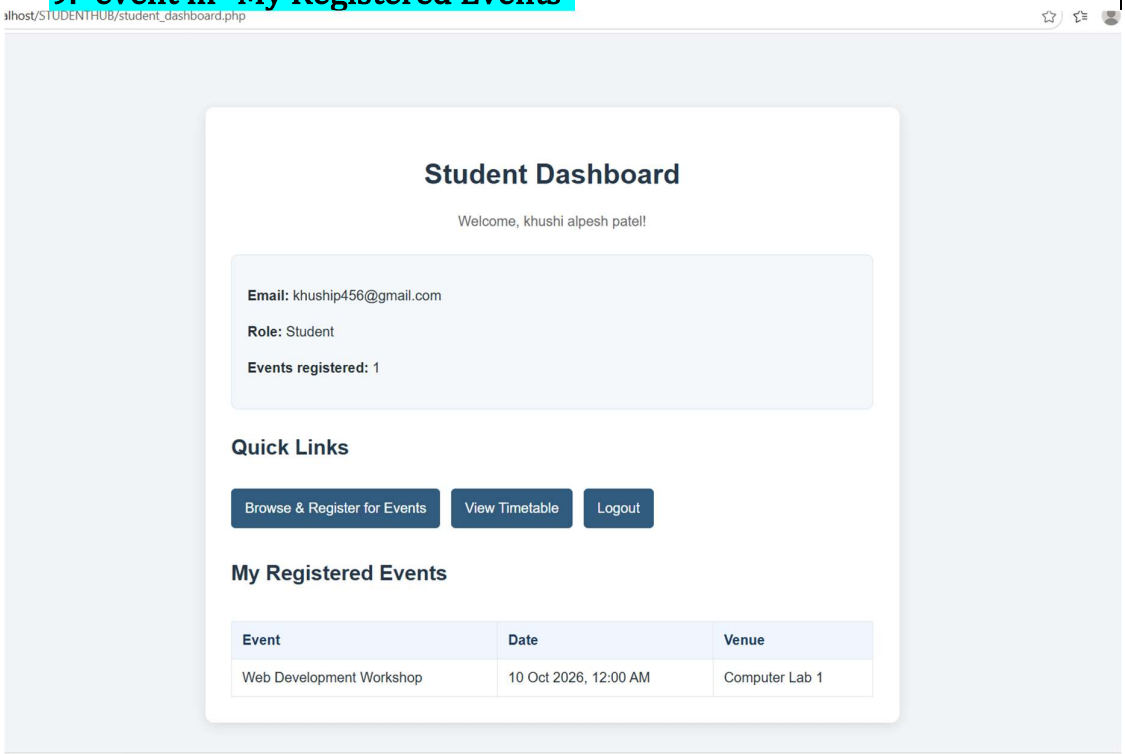

7. events list

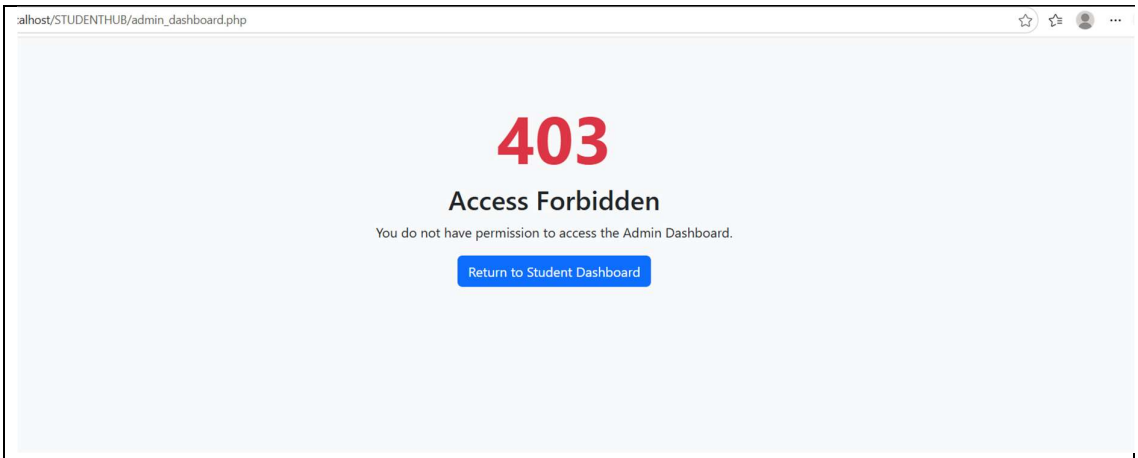

8. "You have registered" plus the Registered tag

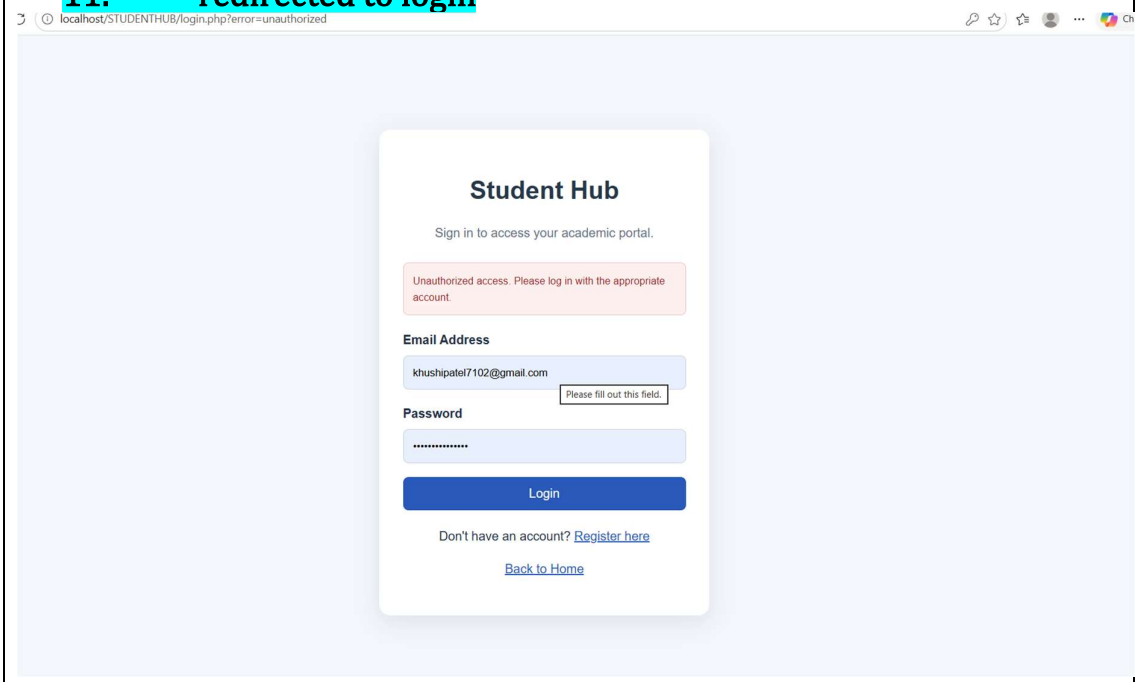

9. event in “My Registered Events”

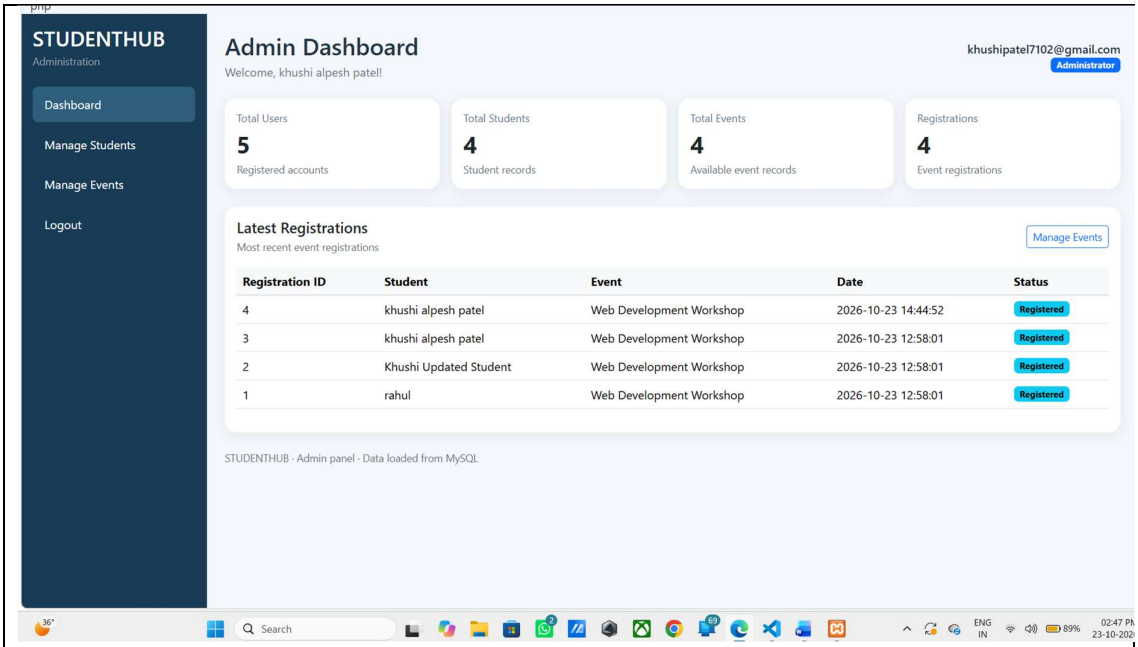

10. 403 Forbidden

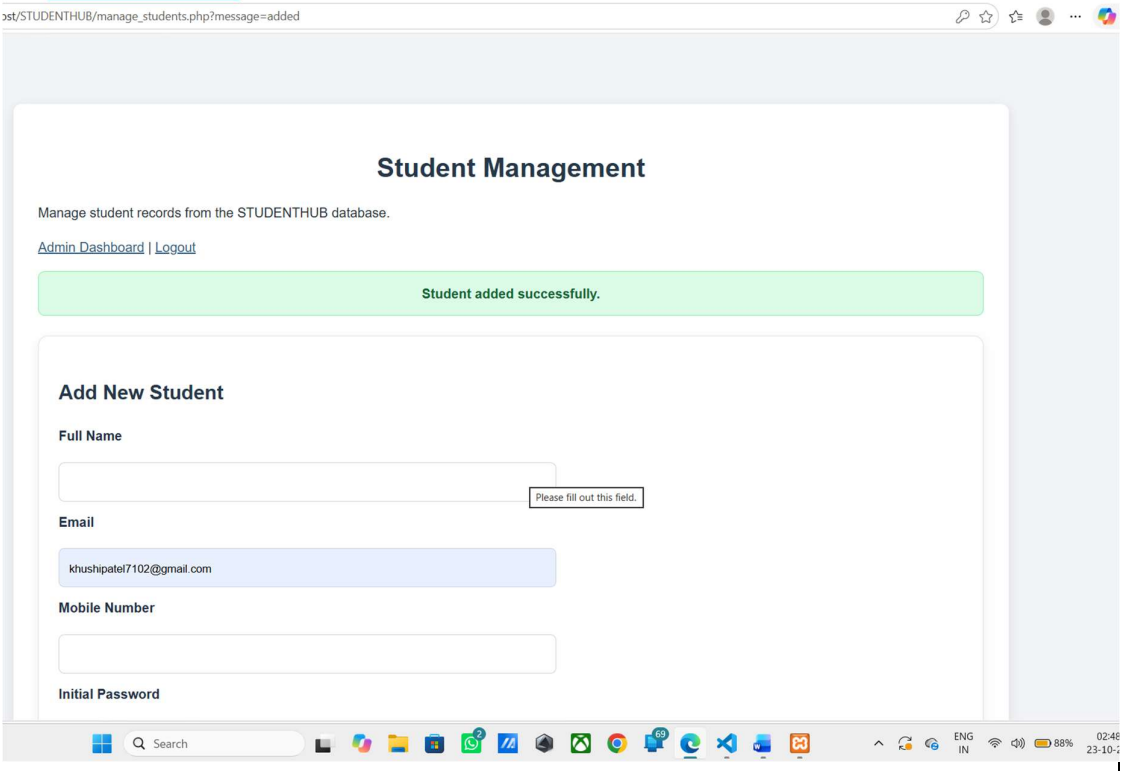

11. redirected to login

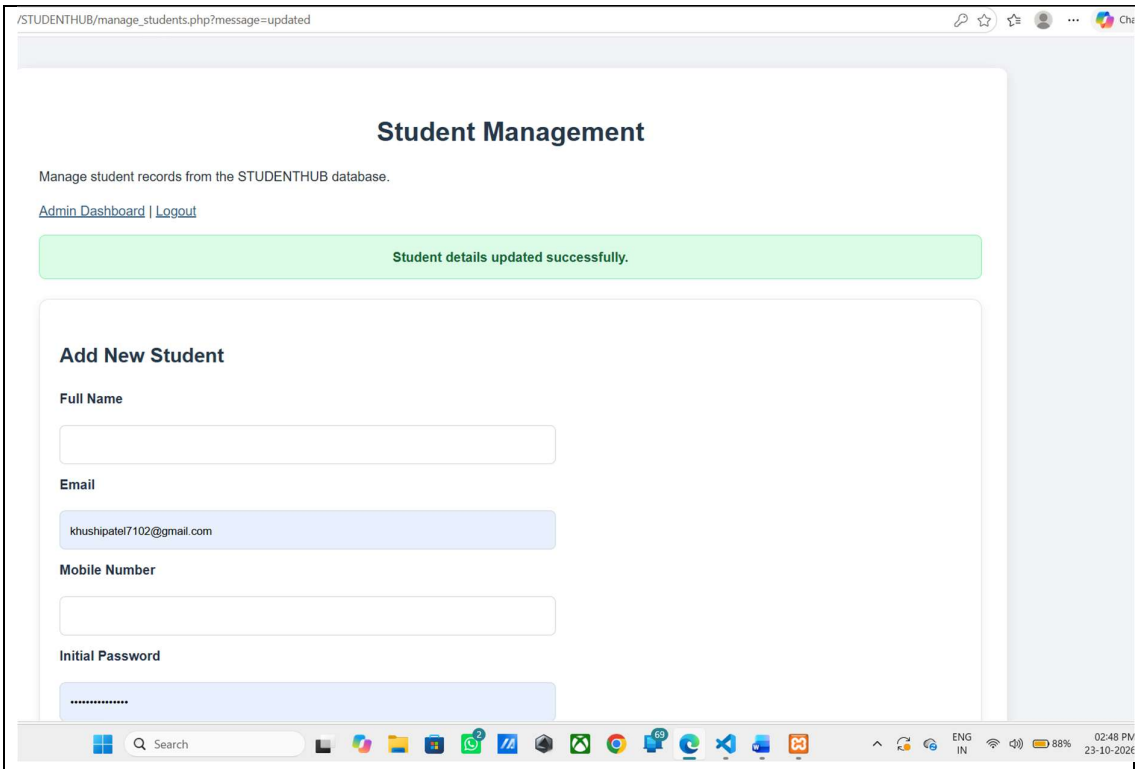

12. admin counts with the new registration in “Latest Registrations”

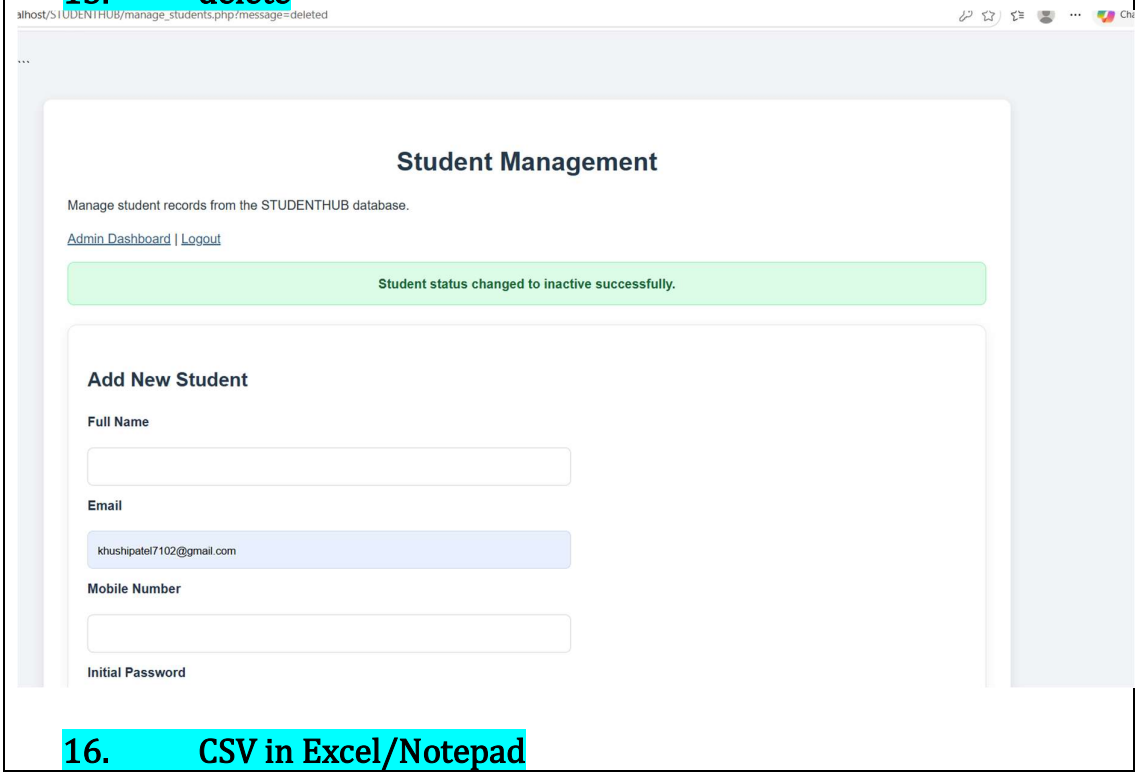

13. add

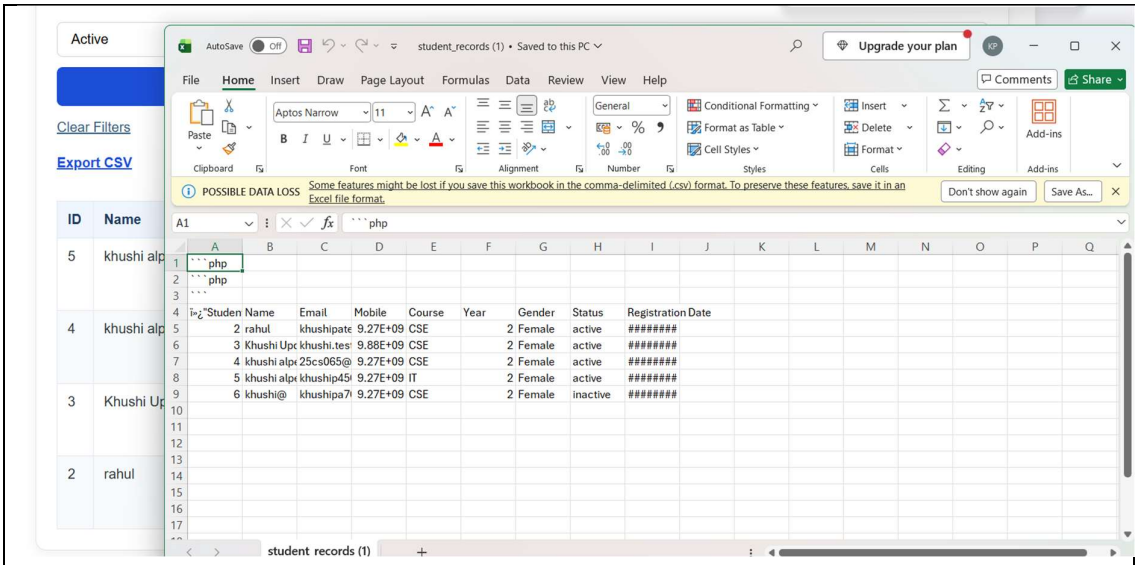

14. edit

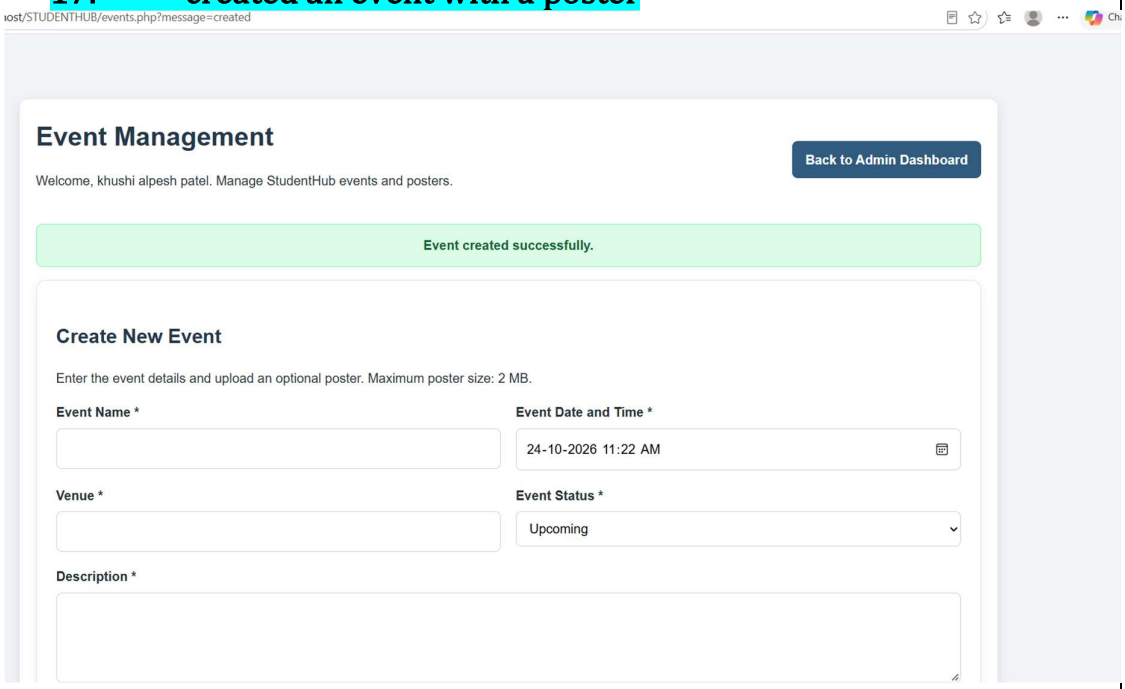

15. delete

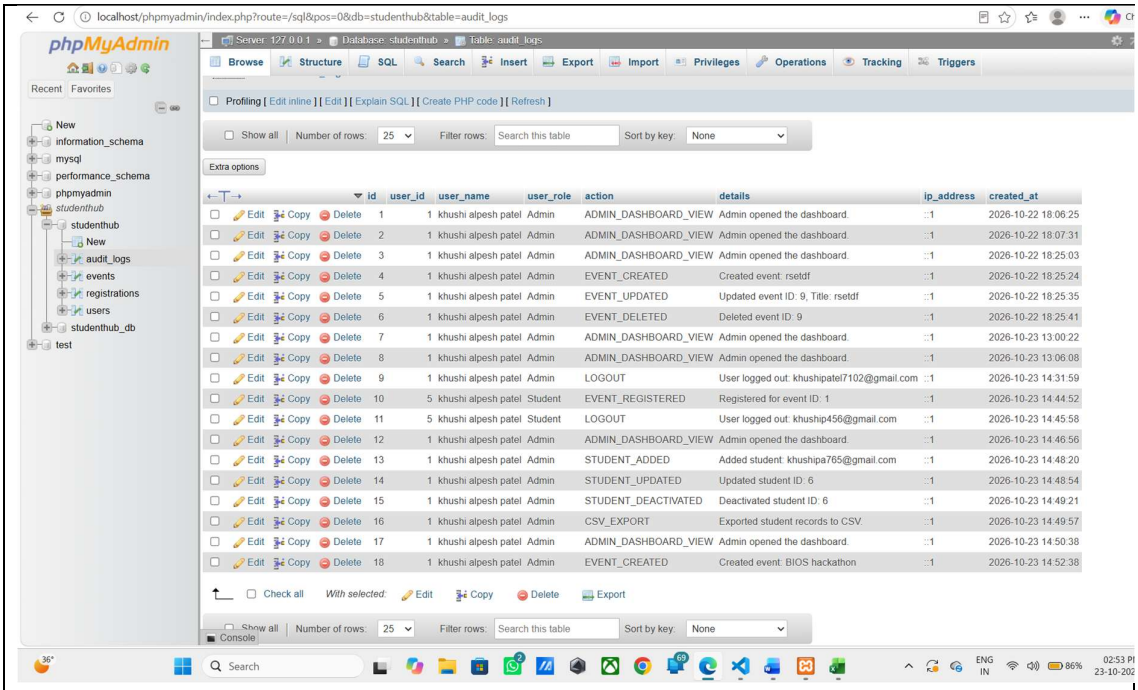

16. CSV in Excel/Notepad

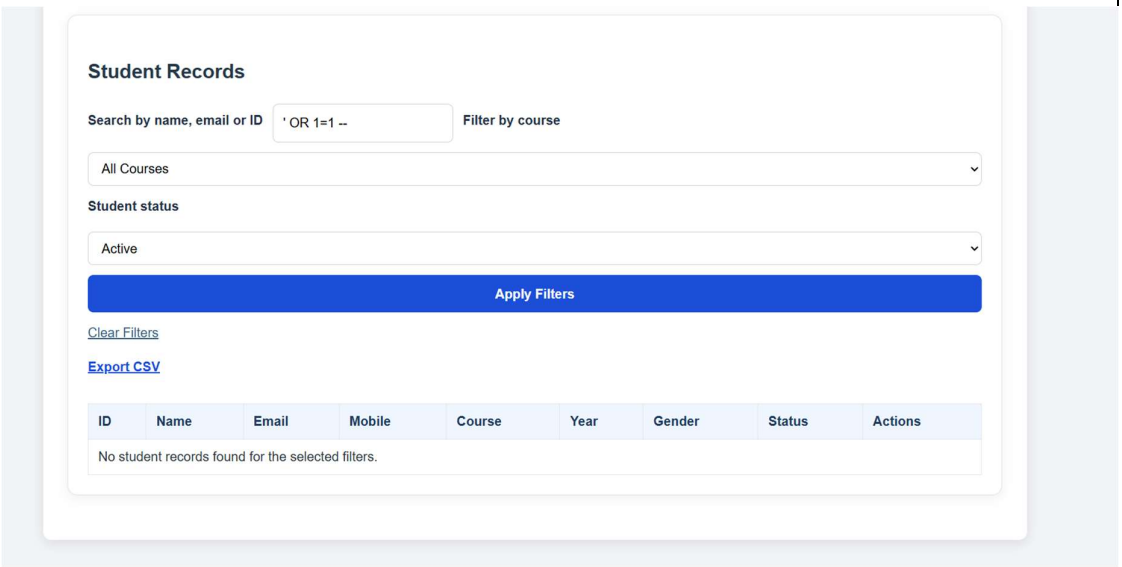

17. created an event with a poster

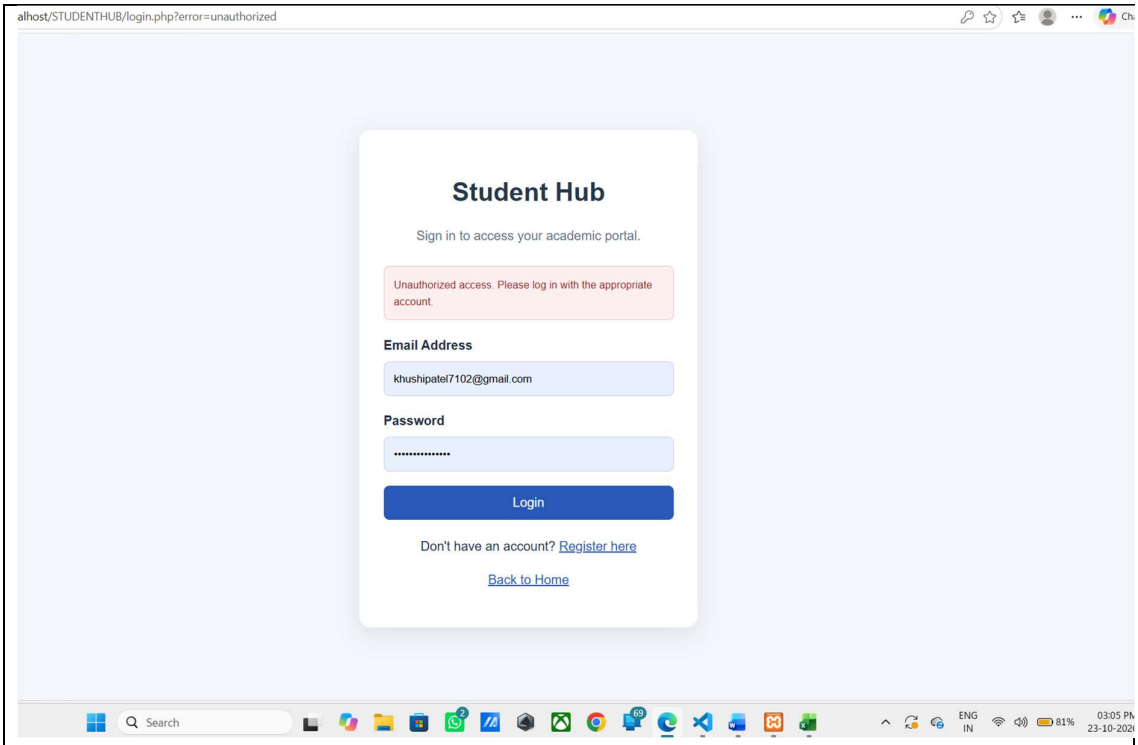

18. rows for LOGIN_SUCCESS, EVENT_REGISTERED, STUDENT_ADDED...

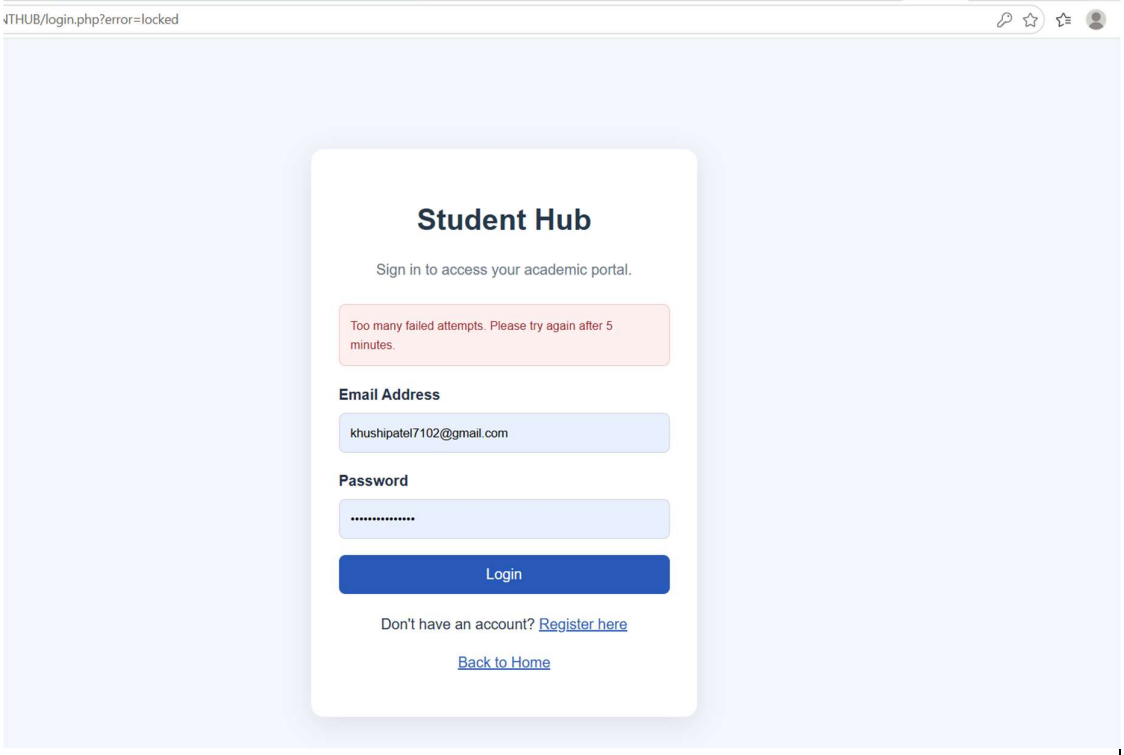

19. SQL injection, search

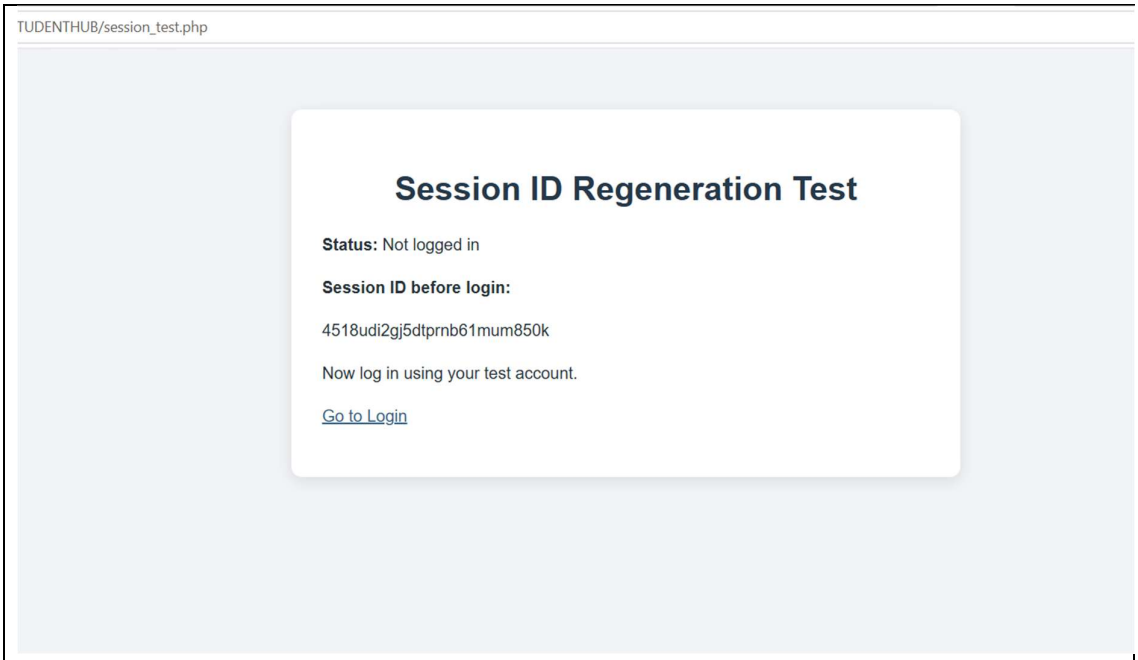

20 unauthorized access

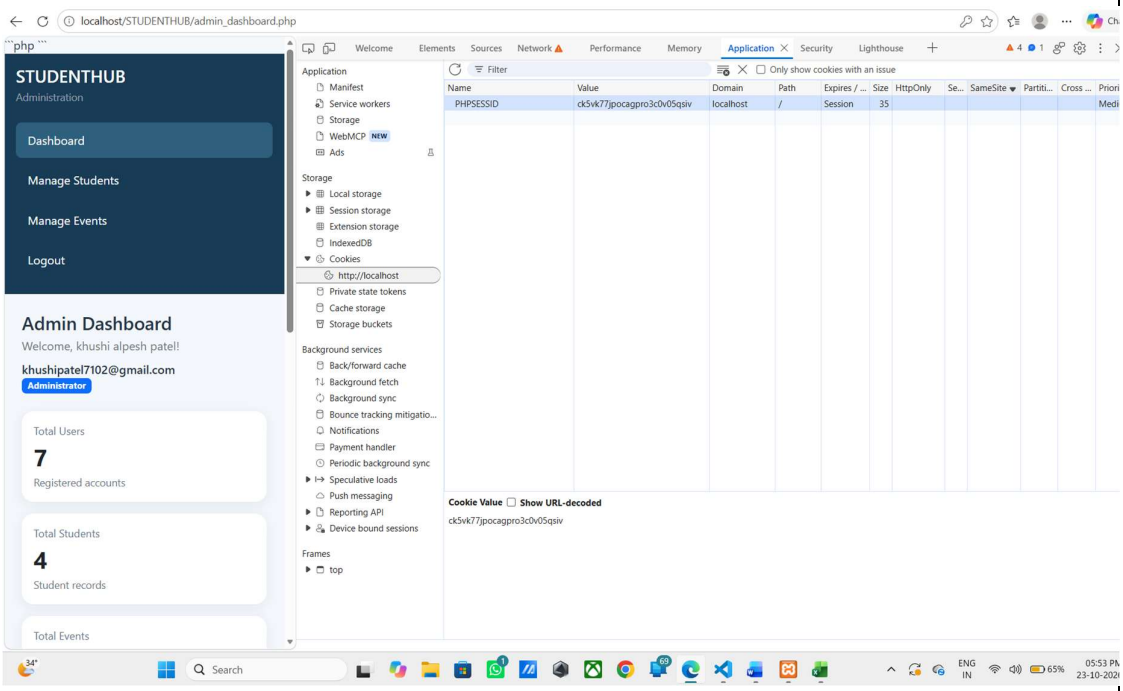

20. Brute force lock

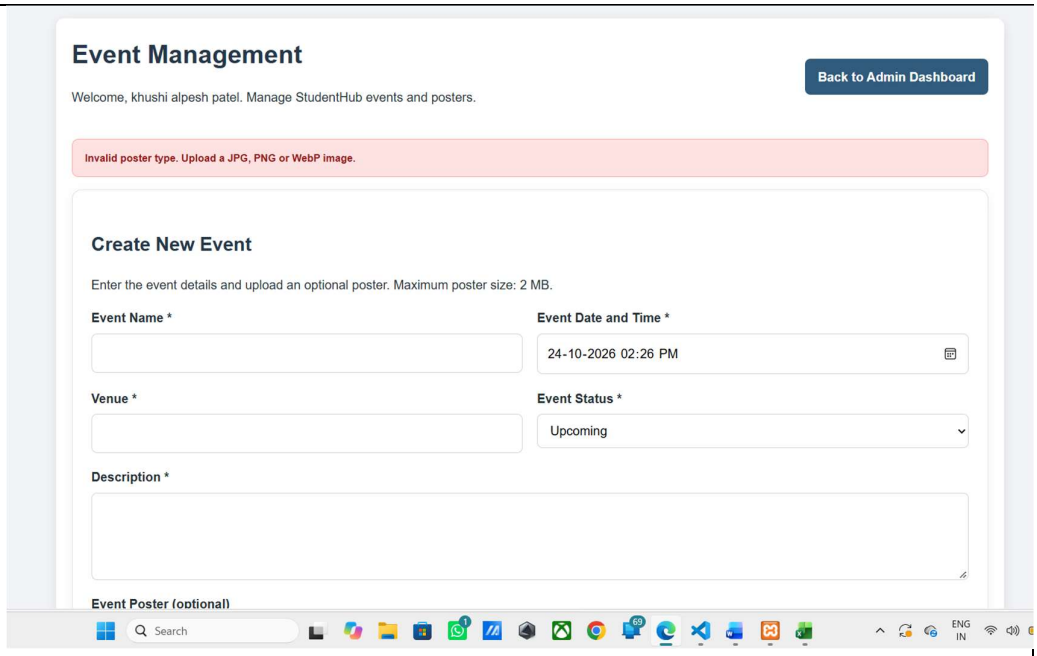

21.session id

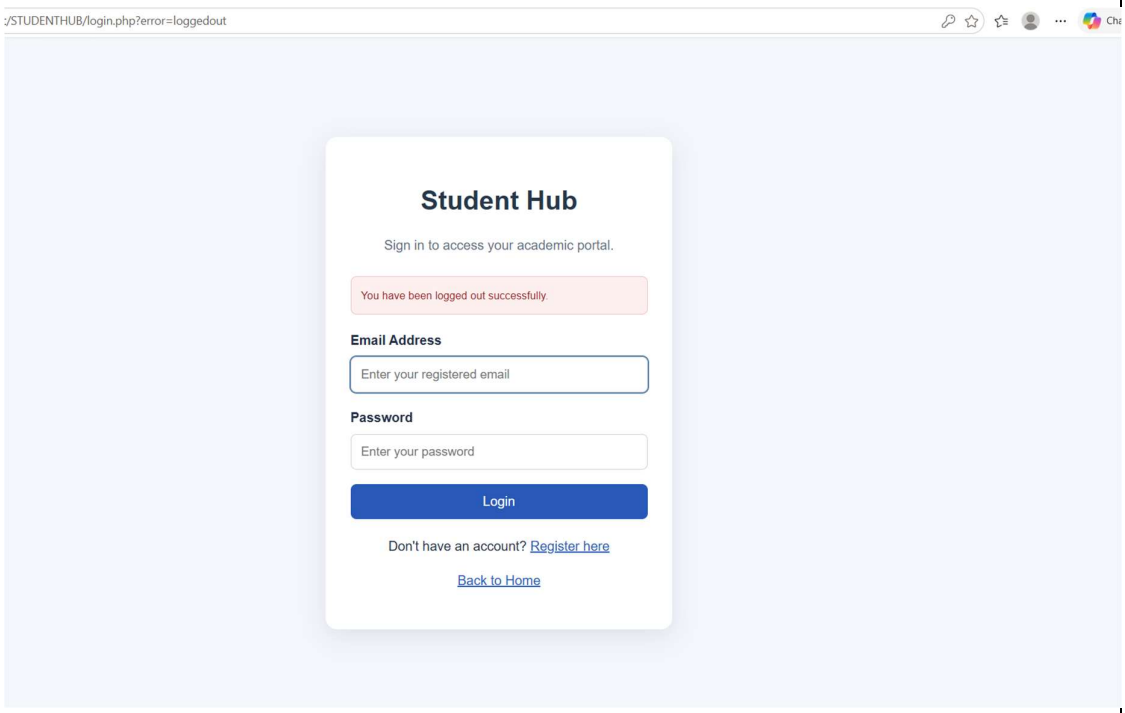

21. Cookies flag

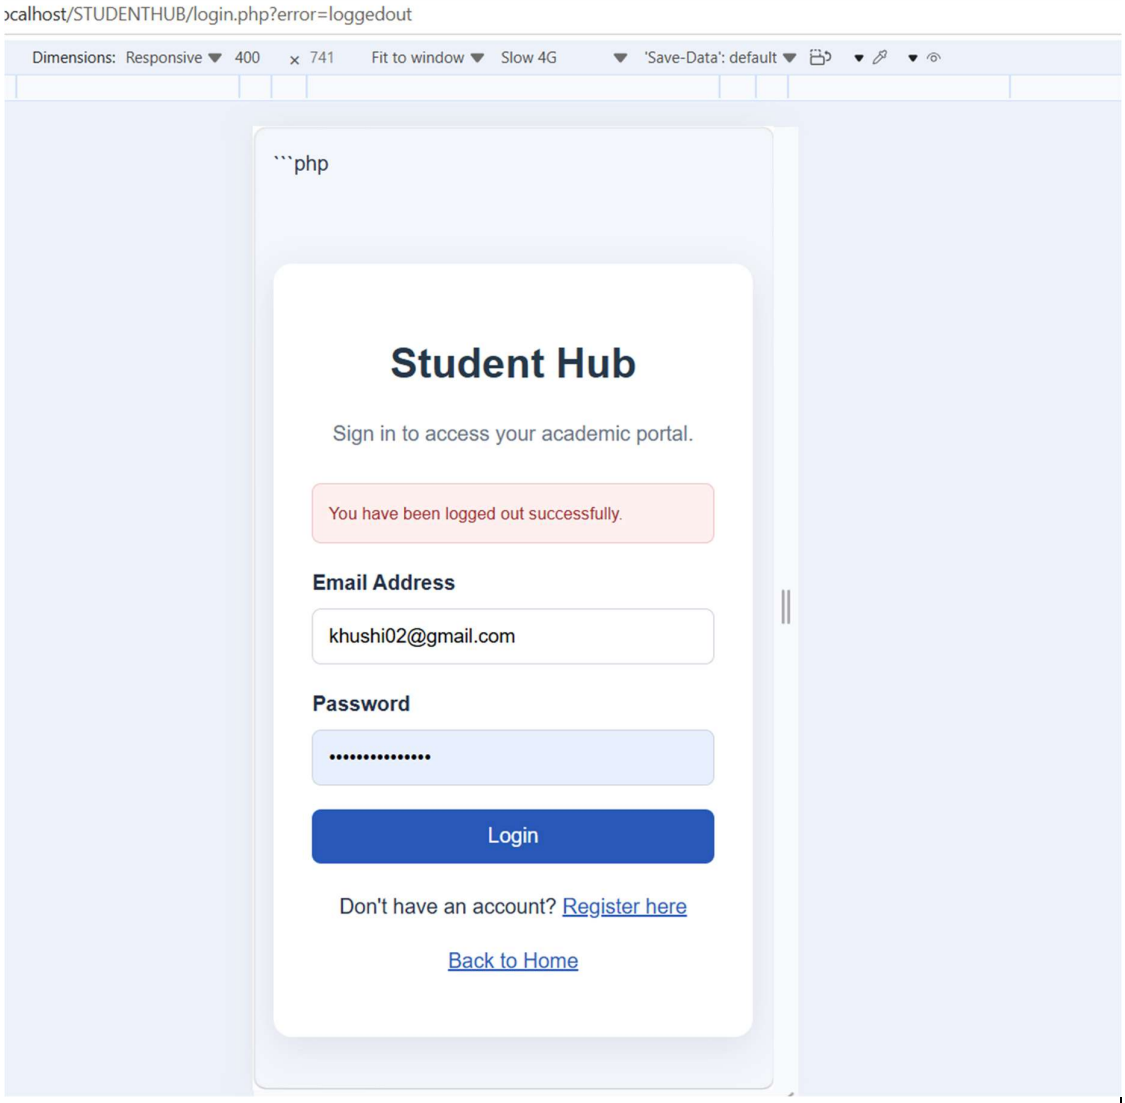

22. Invalid poster type

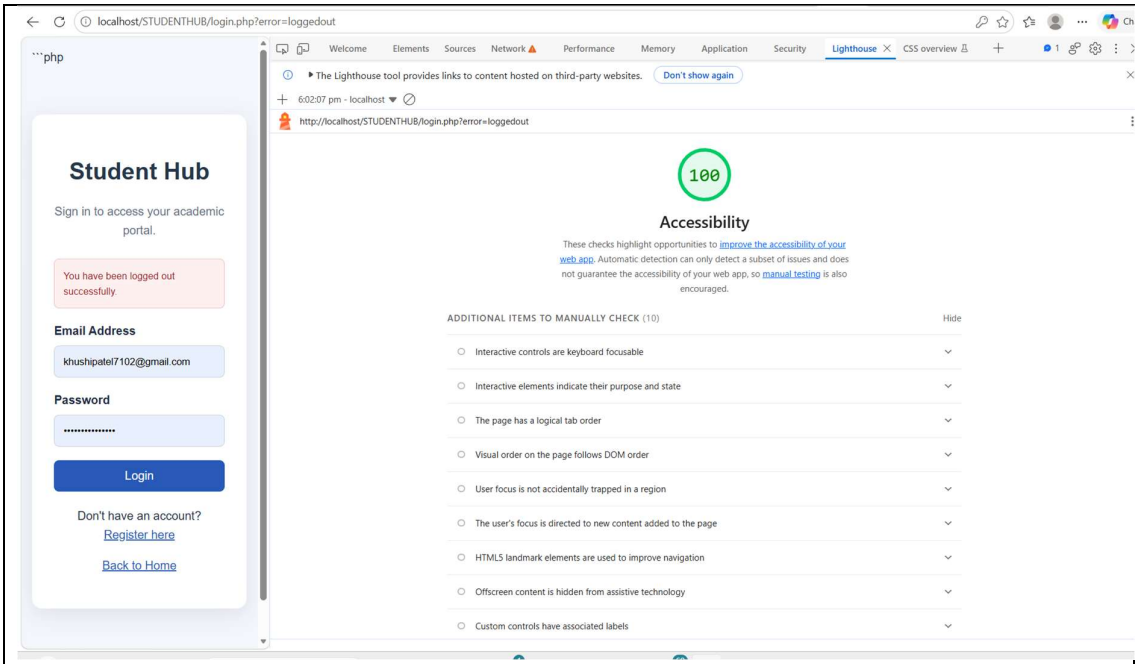

23. keyboard focus email box is outlined by pressing the tab

24. mobile view

25. chrome lighthouse

Conclusion:-

Thus, the StudentHub Portal was integrated into a single web application using HTML, CSS, Bootstrap, JavaScript, PHP, and MySQL. The application was tested for navigation, authentication, role-based access control, database operations, input validation, and security. The project was configured for local deployment using XAMPP and Apache. The source code, database dump, README documentation, test report, and screenshots were prepared for GitHub submission. This practical provided hands-on experience in full-stack integration, debugging, testing, documentation, deployment, and version control.
